## Very Important -

The bounding boxes has to be tight enough so as to only include the object of interest

## The teams must annotate the data collected through collaboration

### 1. Assigning multiple labeler:

- After successful uploading of dataset
- Click on Invite Teammate
- Enter email address
- Select role
- Send Invite

### 2. Assign Images:

- After sending invite to all labelers
- Click on Assign Images

## Versioning of Dataset

You can create version of your dataset by following below steps:

1. **Go to Generate**
2. **Click on Create a version**
3. **Change new version as per need:**
  - Add more images
  - Change train test split ratio
  - Change Preprocessing step
  - Add Augmentation to dataset (as per the requirement)
4. **Click on Create**

### *Note:*

1. **You can add augmentation during dataset generation to create new training examples for the model**

## Health-Check of Dataset

1. While Collecting Data, You must keep in mind that a balance has to be maintained in all the classes
2. Check the health of the dataset to understand and improve its quality by rebalancing classes and other measures
